

Evoluent R3K

Reduced Reach Right Hand Keyboard

It's a stretch with traditional keyboards

A conventional full feature keyboard has navigation and numeric keys located on the right side. When the character keys are centered in front of the user in a proper typing position, stretching to the right is required to reach the mouse.

The R3K reduces reach to the mouse

An updated version of the KB1, the R3K keyboard's numeric keypad is uniquely placed on the left side, so that the mouse can be positioned closer on the right. This greatly reduces the reach required for the mouse and offers a more relaxed arm position.

The left side navigation and numeric keys may be operated with the left hand to reduce reaching for them while using a right-hand mouse.

R3K reduces reach while using the keyboard

A conventional keyboard requires movement from the mouse to the keyboard to press Enter, Del, Page Up, Page Down, Backspace, Home and End.

The R3K keyboard has these often-used keys duplicated on both sides.

One touch shortcut keys

The shortcut keys on many keyboards, are embedded in other keys. Accessing them requires simultaneously pressing Fn and the shortcut key, using two hands. The Evoluent keyboard has dedicated Windows shortcut keys that are accessed with one touch.

Product Code R3K

Technical Specifications

Width	403mm	Connection	Wired USB
Depth	171mm	Compatibility	No driver download required, Hot Keys only work with Windows.
Height	20mm
