

Seat Technology & Dimensions

Our products have been designed with your well-being in mind.

Posture Balance are recognised as manufacturing some of the world's best ergonomic products. We provide a safe and healthy environment in which people can excel and operate at their optimum levels.

Research shows that a poorly designed seat – including some with dual density foams – may have inferior pressure-distribution patterns and ultimately increase disc pressure in the lumbar and coccyx areas causing unhealthy long term effects. Our unique range of pelvic and posture support seat technology now use an amazing gel and visco foam, providing 100% support as the seat draws heat away from the user, and softens / moulds itself to the precise shape of the person in the chair.

G²

Gel/Visco Elastic hybrid flat seat. Available in 3x sizes. Can be cut down. Standard on the bCore, bFresh, bPlus.

IMAGE 1 // Small
W 480mm x D 440mm

IMAGE 2 // Medium
W 500mm x D 460mm
